## SUMMARY

---

Data Engineer with 2+ years building large-scale ETL pipelines and distributed data systems on AWS. Specializes in Spark/PySpark, data lake architecture, and query optimization for high-volume financial reporting workloads (1B+ record datasets).

## EXPERIENCE

---

### **Expedia Group**

*Data Engineer*

*August 2022 - Present*

*Seattle, WA*

- Architect and maintain automated pipelines to ingest and process transactional reporting data across distributed datasets, managing payment tables scaling to 1B+ records using AWS S3 and Trino.
- Partner with cross-functional business intelligence analysts to design optimized data schemas, reducing query latency by 90% for massive ledger datasets accessed via Querybook.
- Designed and embedded data validation and reconciliation logic into the EG Payments reporting application, ensuring data integrity for financial stakeholders by design.
- Redesigned data lake partitioning and query execution strategy, substantially reducing compute overhead and shortening daily reporting SLA turnaround.

### **UCB Department of Electrical Engineering & Computer Science**

*Course Tutor & Undergraduate Student Instructor*

*August 2020 - May 2022*

*Berkeley, CA*

- Taught and mentored 30+ students in CS61A (Introductory Computer Science), leading lab sections and code reviews on programmatic logic, data structures, and functional programming.
- Cultivated student mastery of core software engineering topics, including higher-order functions, environment models, recursion, and algorithmic efficiency.

### **Expedia Group**

*Software Development Engineer Intern*

*June 2021 - August 2021*

*Seattle, WA*

- Built a data processing application to detect and isolate malicious bot behavior across high-volume ad impression and clickstream data.
- Used HiveQL and Apache Airflow to automate ETL pipelines, scheduling secure delivery of bot analytics data and powering fraud-reporting dashboards in Looker.

## SKILLS

---

**Programming:** Python (Pandas), Java, Scala, SQL (T-SQL)

**Databases & Warehouses:** Amazon Redshift, Amazon DynamoDB, SQL Server (Stored Procedures)

**Distributed Computing:** Apache Spark, PySpark, Apache Hadoop, AWS EMR, Trino

**Data Storage & Lakes:** AWS S3 (Object Storage / Parquet Layout)

**Orchestration & DevOps:** Apache Airflow, Git, Jenkins, GitHub Actions, Jupyter, Querybook

## EDUCATION

---

**University of California, Berkeley**

B.A. – Computer Science, Minor – Data Science

*August 2018 - May 2022*
